PROJECT STATUS REPORT · NOVEMBER 4, 2026

On schedule: our proposed MVP is live

Status: Green

14
pages published

3
research update posts

12
photos and posters, all with alt text

0
broken internal links

Done in the past week

- WordPress site set up with APSS colours and font
- Research section: projects, library, posters, updates
- Main site: home, get help, needle exchange, about, contact, donate
- Moved the research site link out of the top navbar and into the home page
- Service details checked against the current APSS site

Planned for next week

- Apply today's feedback and write the customer notes
- Test on phones and check accessibility
- Choose a plugin to search and filter the library
- Plan Education pages, FAQs, Volunteer and Events

What is still open

1. The library has search, but no filters yet
2. Phones and accessibility still need full testing
3. Education pages, FAQs, Volunteer and Events are not built

WHAT WE LEARNED IN CLASS

How we made the site easy to use

Links tell you what they do

→ keeps you on our site. ↗ opens another website.

Affordances and signifiers

Similar things look alike

Services and projects sit in matching cards, so you can scan a page instead of reading all of it.

Gestalt

You can see where you are

A short trail like "Get help › Needle exchange" shows where you are, and projects are marked Current or Completed.

Feedback

Help is always close

"Need help now?" and the phone number are at the top of every page, even the research pages.

End-to-end experience

We show how the work connects

Three simple steps: people report needles, researchers map them, and APSS brings services to those places.

Conceptual model

Built with everyone in mind

Every photo has a written description for people using screen readers, and words are real text, not part of a picture.

Accessibility

YOUR TURN

Try the site yourself

2 minutes

1. **Find the needle exchange hours**
2. **Find the latest research paper**

Then click anything you like. Notice what is easy and what is not.

No phone? Open the site ↗

Scan with your phone camera

groupb.ursse.ca

YOUR TURN

What do you think?

1. What was hard to find, or what is missing?

2. What should we improve first before December 2?

What we are doing next: library filters, Education pages, FAQs, phone and accessibility testing
