# Insights & Needs chart

| Feedback | Insight | Need |
|---|---|---|
| Does not look visually appealing | Inconsistent visual design and aesthetic. Being a former graphic designer, client has higher expectations. | Change in color scheme. Replace visual elements and images. Emphasize pictures of people and staff. |
| Research site landing page is text heavy and not interactive | Overwhelms the user due to dense information when they first click on the website. Especially since it is not the research page itself. | Scale down text usage and introduce graphics to simplify communication and guide the viewer to the actual research and project. |
| Likes Eaton Lab's website. | Wants the publications & projects page in the same website rather than separate. | Integrate/link the research & projects page directly into the main website. |
| Research pages are not easy to use. Need search function for the research database. | Friction in navigation and information gathering. Difficulty in retrieving same info again or looking up multiple publications under the same field | Implementation of a search by keyword and title function for the database. |
| Not visually consistent and looks like it belongs to a different organization. | Inconsistency leads to lack of trust from the user and confusion. | Maintain consistency between the 2 websites. Match the color scheme, typography, visual and graphic elements etc |
