ENSE 271 · GROUP B · ACTIVITY 2 · OCTOBER 2026

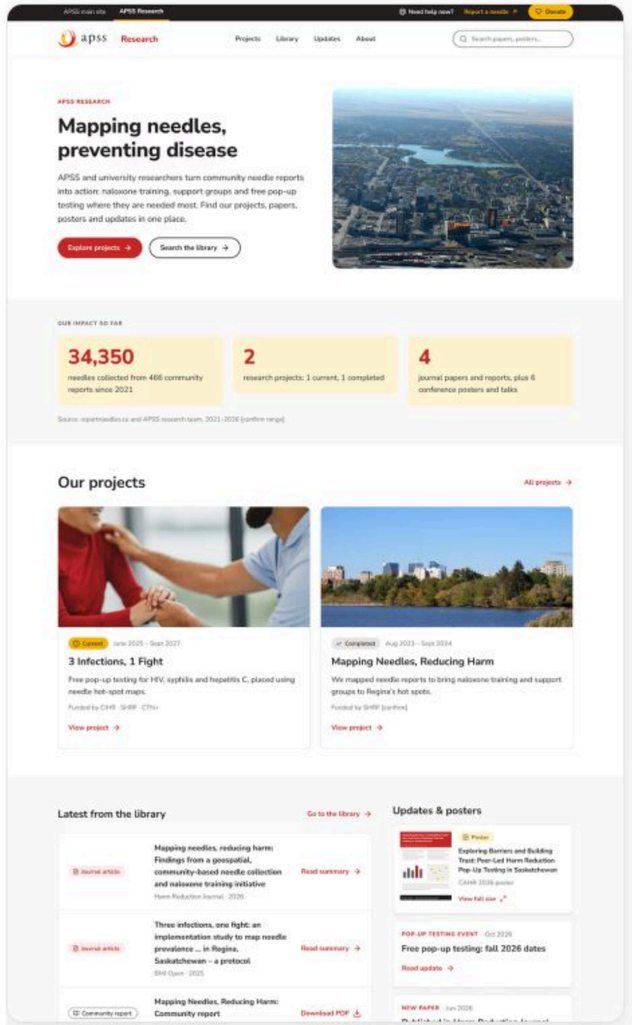

APSS Research + Main Site

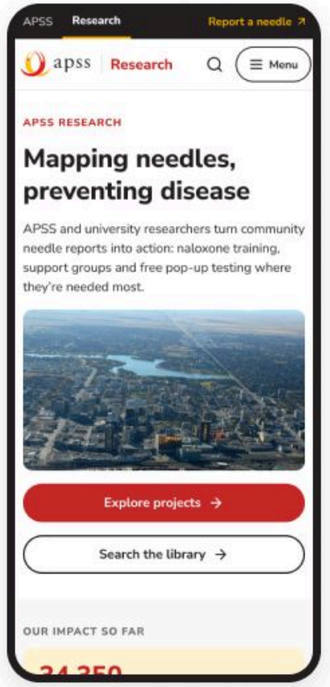

High-fidelity prototype · desktop and mobile · fully clickable

Team	Jacob Liu · Mohammed Saad Shaik · Aubin Chriss Izere · Jesse Ichibor
Client	AIDS Programs South Saskatchewan (APSS) · Erin Hidlebaugh, Program Coordinator
Course	ENSE 271 People-Centred Design · University of Regina · Dr. Tim Maciag

How to view the prototype

- ✓ Open the “Prototype — Desktop” or “Prototype — Mobile” page and press Present (play button, top right).
- ✓ Pick a flow: 1 Research site · 2 Main site (desktop) · 3 Research site · 4 Main site (mobile).
- ✓ Arrow icons tell you what a link does: stay on the site, open another site, open full size or download (see the legend on the Read me frame).
- ✓ Grey “stand-in” pages show where a link would leave the APSS sites.

PROJECTS

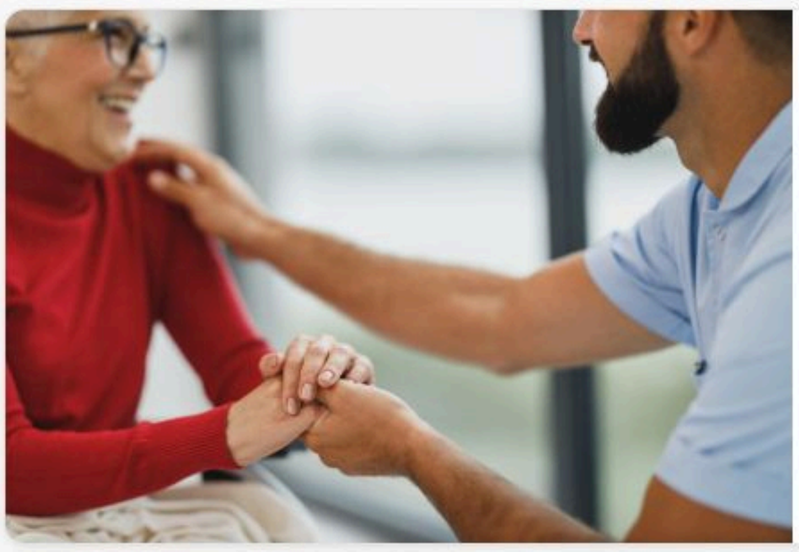

Our research projects

Two projects, one idea: use community needle reports to bring services to the people and places that need them.

How our research connects

1. People report discarded needles on reportneedles.ca
2. Researchers map the hot spots
3. 2023–24: naloxone training and support groups go there
4. 2025–27: free pop-up testing for HIV, syphilis and hep C

Current

Current · June 2025 – Sept 2027

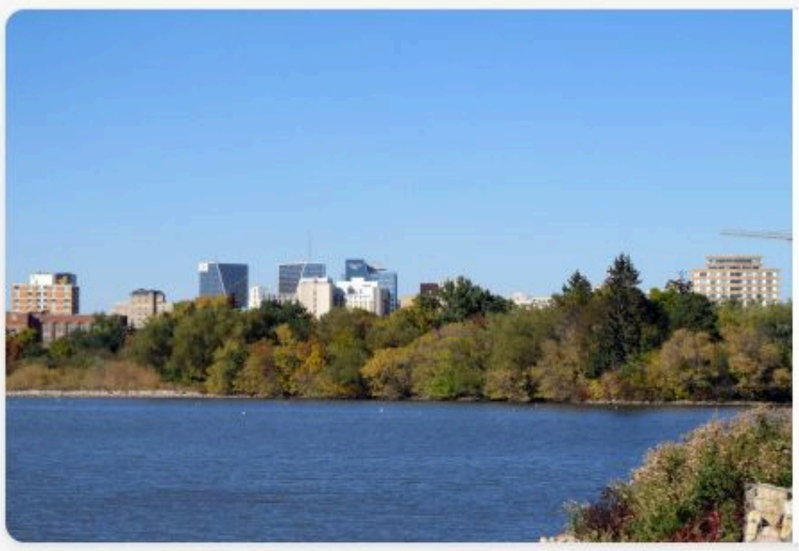

3 Infections, 1 Fight

Free pop-up testing for HIV, syphilis and hepatitis C, placed using needle hot-spot maps. Peers from APSS help people connect to care, PrEP and PEP.

Funded by CIHR · SHRF · CTN+ [confirm]

View project →

Completed

Completed · Aug 2023 – Sept 2024

Mapping Needles, Reducing Harm

We mapped needle reports to bring naloxone training and low-barrier support groups to Regina's hot spots. Findings published in 2026.

Funded by SHRF [confirm]

Current June 2025 – September 2027 [confirm]

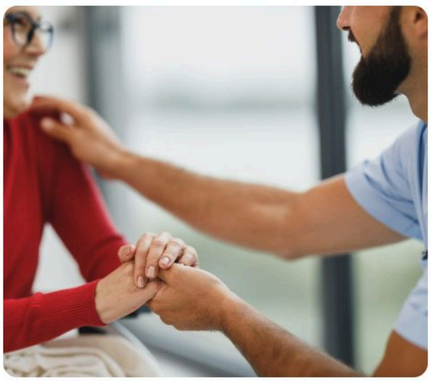

3 Infections, 1 Fight

A community response to HIV, syphilis and hepatitis C in Regina

Saskatchewan's rates of HIV, syphilis and hepatitis C are among the highest in Canada. This project uses maps of reported needles to choose where to hold free pop-up health events, then studies how well they work.

Led by	Dr. Andrew Eaton (Eaton Lab) and Shiny Mary Varghese (APSS) [confirm]
Partners	APSS · University of Regina · Eaton Lab
Funders	CIHR · SHRF · CTN+ [confirm]

University of Regina Eaton Lab

IN SHORT

What we're doing

Pop-up events in parks, parking lots and community spaces offer rapid tests for HIV, syphilis and hepatitis C, first-dose syphilis treatment on the spot, and help connecting to follow-up care.

Why it matters

Many people at risk don't come to a clinic. Bringing testing to where needles are reported reaches people sooner, without judgment.

What we've learned so far

The study plan was published in BMJ Open (2025). Early findings on peer-led testing and PrEP/PEP knowledge were shared at CAHR 2026. Full results are expected after 2027.

How it works

1. Needle reports come in through reportneedles.ca
2. Maps show the hot spots
3. Pop-up testing goes there
4. People are linked to care, PrEP and PEP information, and trusted supports

Completed August 2023 – September 2024

Mapping Needles, Reducing Harm

The first research partnership between APSS and the Eaton Lab

We used reports from reportneedles.ca to map where discarded needles turn up in Regina, then brought naloxone training and low-barrier support groups to those areas.

Funder	Saskatchewan Health Research Foundation (SHRF) [confirm]
Partners	APSS · Eaton Lab
Data	Community reports on reportneedles.ca

reportneedles.ca Eaton Lab

RESULTS IN NUMBERS

315
needle reports, Aug 2023 – Aug 2024

2,836
needles safely disposed of

96%
of reports collected [confirm meaning]

44
people at pop-up naloxone sessions [confirm]

IN SHORT

What we found

Needle reports clustered downtown, and suburban areas had gaps in services.

Naloxone training gave clear, accessible information on reversing an opioid overdose.

People valued the arts-based, low-barrier support groups and felt safe talking about substance use.

What happens next

These maps now guide where 3 Infections, 1 Fight holds free pop-up testing.

IN SHORT

What we studied

Where people in Regina reported discarded needles from August 2023 to September 2024, and what people learned at pop-up naloxone training sessions.

What we found

Reports clustered downtown, and suburban areas had gaps in harm reduction services.

Why it matters

Using maps to decide where to offer training can bring services closer to the people who need them.

IN SHORT

What it is

A description of reportneedles.ca, where anyone can report a discarded needle in real time.

How APSS uses it

To collect needles safely and to plan and evaluate outreach in Regina.

Why it matters

Since 2021 it has gathered thousands of reports that can guide prevention and research.

POP-UP TESTING EVENT · 3 INFECTIONS, 1 FIGHT

Free pop-up testing: fall 2026 dates

Posted October 14, 2026 [placeholder] · 3 min read

We're bringing free, confidential testing into the community this fall. Drop in, no appointment needed [confirm].

Dates and places

Date	Time	Area
Sat, Oct 24	1–4 p.m.	Downtown Regina
Sat, Nov 7	1–4 p.m.	North Central
Sat, Nov 21	1–4 p.m.	Downtown Regina

All dates and areas are placeholders. The exact spot is posted the morning of each event [confirm].

What you can get

- Rapid tests for HIV, syphilis and hepatitis C
- First-dose syphilis treatment on site [confirm]
- Information about PrEP and PEP (medicines that prevent HIV)
- Naloxone kits and safer-use supplies
- Help connecting to follow-up care

Good to know

Free and private. Results in about 15–20 minutes [confirm]. Peers from APSS are there to help, and you don't need to give your name.

Can't make it? Testing is also available at APSS, 1325 Albert St. Get help on APSS

ABOUT THE RESEARCH

Research with community, for community

APSS partners with university researchers to learn from needle reports and bring prevention, testing and support to where they are needed. Findings are shared back with the community.

Partners

University of Regina, Faculty of Social Work

Research partner on both projects.

Visit website

Eaton Lab

Jane Addams College of Social Work, University of Illinois Chicago. Leads the research design and analysis.

Visit Eaton Lab

reportneedles.ca

Needle exchange

Free sterile supplies and safer-use kits. No names or official ID needed: we make an anonymous code from your initials, birth month and birth year.

What you can get

- Sterile needles (1-for-1 exchange, or a 10-pack without exchange)
- Alcohol swabs and condoms
- Sharps containers (40, 200 or 400 needles)
- Pipe kits: one straight or bubble pipe per person (Sat, Sun and Mon)
- Drug-checking strips (fentanyl, benzodiazepines, xylazine)
- HIV self-test kits and naloxone kits
- Counselling on safer sex and safer drug use, and referrals to treatment

Found a used needle?

Report it anonymously, or call The Street Project at (306) 766-7799.

Report on reportneedles.ca

HIV basics

Simple answers about HIV: what it is, how it is passed on, and how to stay safe.

What is HIV?

HIV (human immunodeficiency virus) is a virus that attacks the immune system, the body's defence against infections.

How HIV is passed on

Through direct contact with certain body fluids, such as blood, semen, vaginal fluids and breast milk. It is not passed on by hugging, sharing food or using the same washroom.

Signs to watch for

Many people have few or no symptoms at first. Early signs can feel like the flu. Testing is the only way to know.

Staying safe

Use condoms with water- or silicone-based lube, use new supplies every time, and ask about PrEP, a medicine that prevents HIV.

Living with HIV

There is no cure or vaccine yet, but today's treatment is safer, simpler and works well. People on effective treatment can live long, healthy lives.

HIV and AIDS are not the same

AIDS is the most advanced stage of untreated HIV. With treatment, most people with HIV never develop AIDS.

Get tested: free and confidential

Current June 2025 – Sept 2027

3 Infections, 1 Fight

A community response to HIV, syphilis and hepatitis C in Regina

This project uses maps of reported needles to choose where to hold free pop-up health events, then studies how well they work.

IN SHORT

What we're doing

Free pop-up testing for HIV, syphilis and hepatitis C in parks and community spaces.

Why it matters

Bringing testing to where needles are reported reaches people sooner, without judgment.

So far

Study plan published (BMJ Open, 2025). Results expected after 2027.

Funded by CIHR · SHRF · CTN+ [confirm] · Partners: APSS, University of Regina, Eaton Lab
