ENSE 271 · GROUP B · ACTIVITY 2 · CHECKPOINT #2 · OCTOBER 21, 2026

Usability Questionnaire · APSS Research + Main Site prototype

Formative usability test of our clickable Figma prototype. Client: AIDS Programs South Saskatchewan (APSS). Participants: the customer (Erin Hidlebaugh) and the course instructor (Dr. Tim Maciag), tested in parallel on two laptops, with the last two tasks on their phones.

Session details

Participant code (P1 = Erin, P2 = Tim): _____

Laptop (A / B) · T5 and T6 on own phone or backup tab: _____

Moderator: _____

Note-taker: _____

What we measure for each task. Success: Y = completed, P = partly completed or needed a hint, N = not completed or over 90 seconds. **Time**: seconds from "go" to "done" (90 s cap). **Clicks**: every click or tap, including ones that did nothing. **Ease**: participant rates 1 (very difficult) to 5 (very easy) right after the task. Hints: none. At 60 s one neutral prompt ("Where would you look next?"), recorded as a hint.

Part A · Tasks (quantitative)

Read each task aloud exactly as written. Wording avoids the menu labels so we don't give the answer away.

#	Task (read aloud)	Start screen · success means	Optimal clicks	Success Y/P/N	Time (s)	Clicks	Ease 1–5
Look	**Before T1: a quick look at the site.** About one minute to look around the research site, then the main APSS site. No tasks yet.			Not scored			
T1	"A funder asks which APSS research project is still running. Find it and tell us when it ends."	Research home (R1.0) · names *3 Infections, 1 Fight* and 2027	0–1				
T2	"You just saw a discarded needle in a park. Report it from here."	Mapping Needles, Reducing Harm project page (R2.2) · reaches the reportneedles.ca stand-in (X1)	1				
T3	"You'd like to go to the next free pop-up testing event. Find out when and where it is."	Research home (R1.0) · states a date and an area (R4.x1 pop-up testing post)	1				
T4	"APSS published a paper in the Harm Reduction Journal in 2026. Find it and open it on the journal's website."	Research home (R1.0) · reaches the journal stand-in (X2)	2				
T5	"On your phone, find the number to call APSS for help."	Mobile project page, *3 Infections, 1 Fight* (M-R2.1) · reads the phone number, (306) 924-8420 **On the phone, QR on the slide; backup tab 3 on the laptop**	0–1				
T6	"On your phone, find out which days APSS is open, and what time it opens and closes."	Mobile APSS home (M-1.0) · states the open days and the hours: Mon–Fri 9–12 and 1–4:30, Sat 10–4:30, Sun 11–4 **On the phone, QR on the slide; backup tab 4 on the laptop**	0–1				

Tasks run from simplest to hardest; the two phone tasks come last. Path notes, hesitations and quotes go on the data sheet.

Part B · Open-ended questions (qualitative)

All four questions are asked aloud after the tasks, about one minute each. Write the answer in the box.

Q1. First impression: what three words describe the research site? How does it compare with the current research page?

Q2. Was anything you expected to click not clickable, or did anything take you somewhere unexpected?

Q3. One site or two? Would you rather have the research as a section inside the main APSS site, or as the separate, linked site you just tested?

Q4. Are there any improvements you would suggest? What are they?

Overall rating

How easy was the prototype to use overall? 1 very difficult · 2 · 3 · 4 · 5 very easy Rating: _____

Prototype: Figma file "APSS Sites Hi-fi Prototype (ENSE 271 Group B)". Search results are simulated, and links that leave APSS open grey stand-in pages. Notes only: no faces or voices recorded.
