- Jesse Ichibor
- Aubin Chriss

Check-In Notes

Activity 1 Notes (7th Oct):

Finding

- Change the wording for ‘Affiliates’ in the navigation bar. Not the right term.

Activity 2 Notes (21st Oct):

- Details of events are difficult to locate requiring too much scrolling

- The client navigated to an article through the homepage instead of going to the library as intended; we might have to consider adding more links/navigation to the homepage, or make it more inherently clear how to use the library

- The client stated that the prototype was too sparse, likely hinting to it being too bare (lacking content). Though, she also stated she did not want the website to be cluttered

- Client didn’t seem to notice that the research site was separately linked to the main site; we must work on making more of a distinction between the two sites, whether we are implementing the sites separately or not

Tasks testing Search Difficulty (0 = Had much difficulty to find, 5 Had little difficulty to find):

1. APSS research Project: 5 / 5 - had little to no difficulty to find
2. Reporting Needle Number: 5 / 5 - had little to no difficulty to find
3. Pop-up Site Location: 1 / 5 - had great difficulty to find
4. APSS 2026 published Paper: 3 / 5 - some difficulty to find
5. APSS Help Number: 2 / 5 - had moderate difficulty to find

Menu merge

- Combined both menu headers / navigation headers into one singular header

Hour accessibility

- Make finding the work hours and times more accessible and interactive
- Easier to find on the website.

Impact section link addition

- Make the buttons on the “Impact” section clickable

<u>Activity 3 Notes (4th Oct):</u>

The usage of color(s)

- Over use of white, gray, black is noted throughout the work in progress website.
- The website could be made more visually appealing with the addition of colors such as increasing the amount of red and yellow .

Add-ons and the “How can we help” section

- The entire box including text, image, icon, and section should be a link to a different page or post.
- The “**Twentig**” add-on should be considered in the development process.

Font and text size

- The text and font size is too small and should be enlarged.
- The typeface is adequate for the website.
- Text sizes have too much variation which causes visual discourse.
- There should be focus to reduce the number of text sizes and standardize text size down to 3 to 4 sizes.

Mobile version preferred while Desktop is lacking due to space

- During testing, the mobile version of the website is considered superior.
- Focus and work should be used to bring the desktop version up to that quality level?
- Criticism of the desktop version includes it having too much white space which spreads elements far apart.
- Additionally the desktop mode is noted to be lacking or bare in the lack of content. Additional art assets, links, and details should be considered to be added.

Ensuing links in every element

- Most if not all elements should be usable links to different pages or posts.

Adding more detail and elements to the website

- In general there is excessive white and empty space within the website

- The addition of Art, Article links, time, and material from other pages from navigation throughout the website should be considered

Reintroduce Education section from Original Website

- The current in-development website is lacking the education link and page from the previous version.
- Material such as information and articles from the original website's education section should be transferred to the new one.

Need Help section additions

- The "Need help" section needs to be bigger with potentially the addition of an icon
- The top navigation bar or header should follow the user's screen movements.

Ease of mobile usage

- Links should be thumb accessible at the middle to bottom for mobile devices. Keep around midway down for easy thumb finger access.
